

For this assignment we created a program which ran a game(see other pdfs for details). Personally I learned how the random number generator works in C as well as how to properly use an array. I also learned how to format a Makefile, Personally I didn't add much to the Makefile other than the compiler cleaner and infer feature. I also found that there is a way to use the make program without needing to add a lrc.o I simply ran a compile program meaning there was no need for an lrc.o. I personally went for efficiency with this program meaning that I would take up a little space as possible while still following the coding guidelines. This was also my first use of if statements in C which are pretty much the exact same as in Java.
